

Allfarm SOLVITA 200 g – 1 kg

Allfarm SOLVITA PLUS 200 g – 1 kg

Allfarm Solvita and Solvita *PLUS* - water-miscible vitamin supplements for poultry & pigeons.

Allfarm Solvita and Solvita *PLUS* are water-miscible powders used for the prevention and treatment of vitamin deficiencies in birds of all ages. They can be dissolved in drinking water, added to feed, or dissolved in water and then used to prepare a wet mash.

Which Allfarm Solvita product should you use?

- **Allfarm Solvita** can be used as a dietary supplement and to prevent vitamin deficiencies in birds of any age. It contains 13 vitamins and an energetic carrier.
- **Allfarm Solvita PLUS** is recommended to assist birds through periods of hot weather and heat stress recovery. It contains all the ingredients of Allfarm Solvita, **supplemented with four electrolytes** to help restore electrolyte balance **and raspberry flavouring** to encourage consumption.

Ingredients:

Allfarm Solvita: Vitamin A, Vitamin B1, Vitamin B2, Vitamin B6, Vitamin B12, Vitamin C, Vitamin D3, Vitamin E, Vitamin K3, Niacin, Pantothenic Acid, Biotin, energetic carrier.

Allfarm Solvita PLUS: Vitamin A, Vitamin B1, Vitamin B2, Vitamin B6, Vitamin B12, Vitamin C, Vitamin D3, Vitamin E, Vitamin K3, Niacin, Pantothenic Acid, Biotin, energetic carrier, Sodium Chloride, Sodium Bicarbonate, Potassium Chloride, Sodium Citrate, Microcrystalline Cellulose, raspberry flavouring.

Storage:

This product comes in a resealable bag. Always store the package in a cool, dry location, below 30°C and away from direct sunlight. Do not let the spoon become contaminated if it is left outside the bag.

Shelf life:

Check the packaging for the expiry date.

Ordering:

Allfarm products may be ordered from our website: <https://www.allfarm.com.au> or by telephone: (03) 5979 4488.

Allfarm SOLVITA 200 g – 1 kg**Allfarm SOLVITA PLUS** 200 g – 1 kg

Directions:

Allfarm Solvita products may be given daily at any time of the year. For birds with vitamin deficiencies, or which are sick or stressed, we recommend 3-5 days of continuous treatment. Solvita products can also be given weekly if a low-level supplement is required.

In hot weather, we recommend you use Allfarm Solvita *PLUS*. Warm conditions may cause birds to drink more and eat less, so it may be more effective to use drinking water as your method of administration for this product, but in-feed is also suitable. You should preferably begin administration on the day before a heat wave is due. On hot days, begin providing Solvita *PLUS* early in the day when it is still cooler. Switch back to standard Solvita once the weather has eased.

Mixing these products with medications is not recommended.

Drinking Water Administration

Dissolve into drinking water at a rate of **500 g per 800 litres for poultry** and **500 g per 400 litres for pigeons**.

Solvita products are completely water-soluble and will pass through filters and into drinking lines. But attention should be paid during mixing to ensure that the powder has completely dissolved, and no crystals remain. Always check the inline water filters to ensure there is no undissolved product.

Replace water daily. The dissolved product is rich in nutrients and should not be left for more than 24 hours. In open drinkers this mixture will encourage the growth of algae.

It is important to monitor your birds' water consumption during drinking water administration of Solvita products. They should not cause a decrease in water intake, in fact the taste of Solvita *PLUS* may encourage them to drink more. But in the unlikely event that water consumption decreases, the Solvita must be immediately removed or diluted. Please report the event to Allfarm Animal Health, at the telephone number at the bottom of this page.

Feed Administration

Before use, determine the amount of feed that birds will eat in a normal day.

Supplement regular bird feed at a rate of **10 g per 1 kg of feed** (= 1% w/w). The spoon included with the packet will measure 5 g of powder, so add 2 spoonfuls to 1 kg of feed. We recommend pre-mixing the powder with a small quantity of feed before blending with the main mix.

Alternatively, dissolve into enough water to make a wet mash, which is an excellent method of increasing water intake.

Solvita products will stimulate water consumption. Fresh, cool water must always be available, and is especially critical during hot weather.

Remove any remaining feed and replace with a fresh batch daily, as water encourages bacterial and fungal contaminants to grow. This is especially critical for wet mashes.
